

Product Information Bulletin

PROCOOL P Ethanol Heat Transfer Fluid

PROCOOL P ethanol concentrate will allow you the convenience of mixing on site. Although we recommend the use of de-ionized water many systems contain water that cannot be easily removed and the use of a concentrated product is necessary. Ethanol percentage can be adjusted if necessary to provide the desired freeze protection. Your INTERSTATE sales representative can help you determine the correct fluid concentration. Although it has many possible applications, **PROCOOL P Concentrate** was created specifically for use in geo-thermal heat recovery systems.

PROCOOL P Concentrate is environmentally friendly, nontoxic and has excellent heat transfer properties. **PROCOOL P Concentrate** is based on a renewable ethanol (grain) alcohol mixture that mixes easily with water for faster installation. It is the one of the least toxic heat transfer fluids available for geo-thermal heat recovery systems.

PROCOOL P has successfully completed the 336-hour ASTM D-1384 corrosion test. A certificate of assurance is available upon request.

PROCOOL P can be purchased as a concentrate or pre-blended with de-ionized water to meet your specification for boiling, freeze and/or burst protection.
