

Product Information Bulletin

INTERCOOL® Procool N Concentrate

PROCOOL N ethanol concentrate will allow you the convenience of mixing on site. Although we recommend the use of de-ionized water many systems contain water that cannot be easily removed and the use of a concentrated product is necessary. Ethanol percentage can be adjusted if necessary to provide the desired freeze protection. Your INTERSTATE sales representative can help you determine the correct fluid concentration. Although it has many possible applications, **PROCOOL N Concentrate** was created specifically for use in geo-thermal heat recovery systems.

PROCOOL N Concentrate is environmentally friendly, nontoxic and has excellent heat transfer properties. **PROCOOL N Concentrate** is based on a renewable ethanol (grain) alcohol mixture that mixes easily with water for faster installation. It is the one of the least toxic heat transfer fluids available for geo-thermal heat recovery systems.

PROCOOL N can also be purchased in premixed concentrations pre-blended with de-ionized water to meet your specification for boiling, freeze or burst protection.
